netZtouch

The netZtouch QBX 7800 is a sleek, touch screen device that acts as an Online Account based Copy Controller and Print Release Station.

Functionality

The netZtouch QBX 7800 has a 7.5" Color LCD touch screen and can be equipped with a magnetic swipe, contactless, or barcode card reader for authentication purposes. Communication security is enhanced with SSL certification over the network. Once the user is authenticated, the print or copy transaction is processed, charged for and logged. The print job is then released or the copy function enabled and the transaction balance displayed. The QBX is equipped with an internal switch to support a single network connection for both the QBX and the MFD.

Copy/Print

The netZtouch QBX 7800 boasts a very intuitive touch screen experience.

The user logs in using their contactless, magnetic stripe, or bar-coded card. They can also enter their username and password or network credentials.

The interface easily allows the user to switch between the print release and copier modes with the press of a button.

The cost of each print/copy job is displayed and the user account balance updated in real time for every transaction.

In copier mode, the user has the option to charge copies to different accounts i.e. personal or departmental.
