PaperCut Mobility Print for iOS, Android, Chrome OS, Windows and MacOS

Call us now: 800.236.8499
Email us: sales@ecoprintq.com
Making life easy for end users and Administrators

Benefits

1. Allows users to set up printing themselves without the need to contact a SysAdmin!
2. Mobility Print provides a native print experience for all operating platforms and devices!
3. No need for the user to join the Network Domain or know the IP address of a printer!

How It Works

Mobility Print sits on the print server in front of the existing print services. It provides a new set of services (protocols) to achieve a streamlined print experience. The existing native print queuing system and drivers installed on the system are still used and not bypassed.

Printer discovery — Helps end users find printers on the client

Print job delivery — Deliver a print job from a client to a printer. The print job delivery method is dependent on the type of client being used.
What you should know about DNS

The Mobility Print server has a mini embedded DNS server. You need to configure your local DNS server to forward printer discovery requests to the Mobility Print server’s embedded DNS.

Device requirements

- Chrome OS with Chrome version 4.3+ (supported devices include Chromebooks from Acer, Asus, HP, Lenovo, and Toshiba)
- Android 4.4+ (supported devices include Android phones and tablets from Google, Samsung, HTC, Lenovo, LG, Sony, Huawei among others)
- iOS 9.2+ (supported devices include iPhones, iPad, MacBook, MacBook Pro, or just a Mac)
- Microsoft Windows 7+
- macOS Yosemite+ I 10.10
